Slurry pump design is governed by wear effects, which influence the pump's performance, reliability and maintenance costs. One of the highest areas of wear occurs in the impeller suction sealing area. Because of the occurring leakage flow rate and its corresponding high velocities in the nose sealing gap, it wears out much faster than most of the other wet end parts do and sets the service ...

Prediction of impeller nose wear behaviour in centrifugal ...
Centrifugal pumps are used to transport fluids by the conversion of rotational kinetic energy to the hydrodynamic energy of the fluid flow. The rotational energy typically comes from an engine or electric motor. They are a sub-class of dynamic axisymmetric work-absorbing turbomachinery. The fluid enters the pump impeller along or near to the rotating axis and is accelerated by the impeller ...
