The Fringe of Optics - PhET doprinos

Optics with diameters
less than 3.00mm,
such as micro-lenses or
micro-prisms, are
typically not beveled
due to the likelihood of
creating edge chips in
the process. It is
important to note that
for small radii of
curvature, for example,
lenses where the
diameter is $\geq 0.85 \times$
radius of curvature, no
bevel is needed due to
the large angle
between the surface
and edge of the lens.
