Introducing the Region: Physical Geography

Physical geography is the study of our planet and its systems (ecosystems, climate, atmosphere, hydrology). Understanding the climate and how it's changing (and the potential results of those changes) affect people now and can help plan for the future. Because the study of Earth is vast, numerous sub-branches of physical geography specialize in different areas, from the

upper limits of the sky to the bottom of the ocean.

Introducing The Region Physical Geography

The physical geography of the mainland and the insular region is dominated by a tropical type A climate. Cooler temperatures may be found in the mountainous regions and more even temperatures ranges can be found along the coasts. Tectonic plate activity is responsible for the many earthquakes and volcanic eruptions that occur in the realm.

11.1 Introducing the Realm - World Regional Geography

Regional geography takes this holistic approach, exploring both the physical and human characteristics of the world's regions. Much of Earth's physical landscape, from mountains to volcanoes to earthquakes to valleys, has resulted from the movement of tectonic plates. As the theory of

Introduction - World Regional Geography

We can organize these subfields into two broad realms—human geography, which deals with social, economic and behavioral processes that differentiate places, and physical geography, which examines the natural processes occurring at the Earth's surface that provide the physical setting for human activities. Figure 1.3 is a diagram showing the principal fields of physical and human geography.
