Infectious Causes Of Cancer Targets

Looking world wide we can now point at the main infectious agents involved in cancer. These are human papillomavirus (HPV), which is recognised by the World Health Organisation as a cause (and probably the primary cause) of cervical carcinoma; hepatitis B and C viruses (HBV and HCV), which certainly contribute to hepatocellular carcinoma; and Helicobacter pylori , which most certainly contributes to gastric carcinoma.

Infectious Causes of Cancer: Targets for Intervention ...

Recent developments, particularly in molecular biology, have produced fresh insights into how cancer relates to infectious agents, novel tools for its diagnosis, exciting possibilities for vaccines, and new targets for therapy. In Infectious Causes of Cancer: Targets for Intervention, James J. Goedert and a team of leading experimental and clinical researchers provide critical, integrating surveys of those viruses, bacteria, and parasites that are now known to play a major role in cancer ...

Infectious Causes of Cancer - Targets for Intervention ...

Even the discussion of AIDS as the disease that brought infectious agents to the attention of oncologists overlooks the collective experience of many physicians and researchers in Africa and elsewhere who have thought infections to be the likely causes of many cancers, such as hepatocellular carcinoma, cancer of the urinary bladder, and even pre-AIDS Kaposi's sarcoma.
