Psychology studies thought and perception, with broad areas such as language, cognition, memory, group psychology and abnormal psychology. Neuroeconomics is the subset that focuses on thought about our choices, especially the cognition that happens when we understand our options and then choose one. Neuroeconomics findings tend to confirm that emotions are an important factor in many economic choices. Experiments Edit. In a typical behavioral economics experiment, a subject is asked to make ...

Neuroeconomics | Psychology Wiki | Fandom

Neuroeconomics is the study of how organisms make value-based decisions and how these decisions are expressed neurally, cognitively, and behaviorally. Though the field concerns itself with all steps of the valuation process, from stimulus perception through action selection and motor response, by far the most progress has been made in understanding the perception of rewarding stimuli and how the brain learns to assign them value.
