### [1404.2986] A Tutorial on Independent Component Analysis

The statistical model in Eq. 4 is called independent component analysis, or ICA model. The ICA model is a generative

model, which means that it describes how the observed data are generated by a process of mixing the components  $s_i$ . The independent components are latent variables, meaning that they cannot be directly observed.

### Independent Component Analysis: Algorithms and Applications

Independent Component Analysis (Herault and Jutten, 1984-1991) • Observed data  $x_i(t)$  is modelled using hidden variables  $s_i(t)$ :  $x_i(t) = \sum_{j=1}^m a_{ij}s_j(t)$ ,  $i = 1 \dots n$  (1) or as a matrix decomposition  $X = AS$  (2) • Matrix of  $a_{ij}$  is constant parameter called “mixing matrix” • Hidden random factors  $s_i(t)$  are called “independent components”

In signal processing, independent component analysis (ICA) is a

computational method for separating a multivariate signal into additive subcomponents. This is done by assuming that the subcomponents are

non-Gaussian signals and that they are statistically independent from each other. ICA is a special case of blind source separation.
