Manual Functional Decomposition Analysis

Functional decomposition in business analysis. Functional decomposition is the analysis of complex systems by breaking them down into smaller simpler elements. It involves breaking down processes, systems, functional areas, or deliverables into simpler components, so that each part can be analyzed separately. By breaking down larger components into smaller parts, it allows the Organization to measure and track

each work effort involved in implementing the solution.

Functional Decomposition Definition

In functional decomposition of engineering systems, which is a method for analysing engineered systems, the basic idea is to try to divide a system in such a way that each block of the block diagram can be described without using the words 'and' or 'or'. This exercise forces each part of the system to be assigned a pure function.

Many methods have been defined to reduce computation time and working memory usage. This problem was recently studied by the authors who proposed an approach based on

functional decomposition. A complex fault tree is recursively decomposed into a set of mutually exclusive simpler fault trees until their dimensions are compatible with the available working memory size.
