Bayesian Optimization is an efficient method for finding the minimum of a function that works by constructing a probabilistic (surrogate) model of the objective function. The surrogate is informed by past search results and, by choosing the next values from this model, the search is concentrated on promising values.

Estimation of distribution algorithm - Wikipedia

Although these functions are separable, with bounded complexity and uniformly scaled sub-function contributions, the hierarchical Bayesian Optimization Algorithm (hBOA) scales exponentially on both. We argue that test problems containing parity functions are hard for EDAs because there are no interactions in the contribution to fitness between any strict subset of a parity function's bits.
