Statics mainly deals with the forces acting on stationary bodies/body. All the forces acting are in equilibrium (ie. Moment about a point is ZERO ; Summation of forces along X and Y direction is ZERO) Dynamics is the study of forces acting on moving

bodies/body. Application of forces when they are in motion. (here moment and displacement are NOT ZERO)

Statics is the branch of mechanics that is concerned with the analysis of loads (force and torque, or "moment") acting on physical systems that do not experience an acceleration ($a = 0$), but rather, are in static equilibrium with their environment. The application of Newton's second law to a system gives:
