An Evans balance, also known as a Johnson-Matthey balance is a device for measuring magnetic susceptibility. Magnetic susceptibility is related to the force experienced by a substance in a magnetic field. Various practical devices are available for the measurement of susceptibility, which differ in the shape of the magnetic field and the way the force is measured. In the Gouy balance there is a homogeneous field in the central region between two poles of a permanent magnet, or an electromagnet.

MSB-1 Magnetic Susceptibility Balance & Accessories - Alfa ...

In electromagnetism, the magnetic susceptibility is a measure of how much a material will become magnetized in an applied magnetic field. It is the ratio of magnetization M to the applied magnetizing field intensity H . This allows a simple classification, into two categories, of most materials' responses to an applied magnetic field: an alignment with the magnetic field, $\chi > 0$, called paramagnetism, or an alignment against the field, $\chi < 0$, called diamagnetism. Magnetic Susceptibility Lecture

The Johnson-Matthey magnetic susceptibility balance is very similar to the traditional Gouy balance but, instead of measuring the force that a magnet exerts on a sample, the opposite force that the sample exerts on a suspended permanent magnet is observed. The mass susceptibility, χ_g , is calculated using: $\chi_g \text{ CLR}$

Magnetic Susceptibility - La Salle University

The basis behind the magnetic susceptibility balance is that a paramagnetic sample will be attracted to a magnet and a diamagnetic sample will be slightly repelled. In the balance used, the sample is fixed in position and the force of the sample on a pair of permanent magnet is measured yielding the measured magnetic susceptibility.

Magnetic Susceptibility - OKBU.net

Magnetic susceptibility is the magnetic response of a substance to a magnetic field and can result in local magnetic field inhomogeneities and signal loss. These effects are proportional to field strength and the differences in susceptibility of two regions. Magnetic susceptibility increases with field strength.
