Blast loads are dynamic, impulsive and non-simultaneous over the length of a roof. To design against explosions, a procedure has been developed to devise a uniform dynamic load on a roof that matches the response from blast loads.

Blast Loading and Its Effects on Structures

the effect of blast loads on buildings is a serious matter that should be taken into consideration in the design process. Although these kinds of attacks are exceptional cases, man-made disasters; blast loads are in fact dynamic loads that need to be carefully calculated just like earthquake and wind loads.

DESIGN AND ANALYSIS OF BLAST LOAD ON STRUCTURES

The objective of this paper is to crystallize blast resisting design in architectural and structural points of view by impending some fundamental changes and additional features to the standard plan of a building. The behavior of the structure is abnormal when the blast occurs depending on the magnitude and location of the explosion takes place.

BUILDING DESIGN ASPECTS AND BLAST LOAD DETERMINATION ...

The capacity of the frame system to resist blast loading should therefore exceed the corresponding capacity of the glazing, often referred to as the "glass fail first criteria." Factors of two to three, over the nominal capacity of the glass to resist breakage, may be required to design the frames.
