In cardiac catheterization (often called cardiac cath), your doctor puts a very small, flexible, hollow tube (called a catheter) into a blood vessel in the groin, arm, or neck. Then he or she threads it through the blood vessel into the aorta and into the heart. Once the catheter is in place, several tests may be done.

Cardiac Catheterization | Johns Hopkins Medicine

With some children who have heart problems, it may be possible to treat it in the heart catheterization laboratory. A cardiac catheterization with an interventional procedure means that some form of repair will be made through the use of a catheter, rather than just using the catheter to collect information (diagnostic procedure). Examples are closing holes in the heart, blocking off abnormal blood vessels, or as an adjunct to surgery.

Heart Catheterization, Interventional | Congenital Heart ...
