QoS-based Wavelength Routing in Multi-Service WDM Networks ...

Wavelength routing is a term accepted by many researchers to describe two functions: routing and wavelength allocation (RAW). By means of routing functions, the concatenated WDM links between source and destination can be found, while wavelength allocation refers to the allocation of a wavelength (channel) along each of these links. The term wavelength routing is, however, not just an abbreviation: these two problems, as shown in many of the works, are closely related and can be solved ...

A multipopulation parallel genetic simulated annealing ...

In the algorithm, routing and wavelength assignment are integrated into a single process. For routing, the objective is to find a cost suboptimal multicast tree. For wavelength assignment, the objective is to minimize the delay of the multicast tree, which is achieved by minimizing the number of wavelength conversion. Thus both the cost of multicast tree and the user QoS satisfaction degree can approach the optimal. Our algorithm also considers load balance. Simulation results show that the ...
