Biology Seed Germination Lab Answer

The Process of Seed Germination. The complete process of seed germination is carried out in the following steps: During the beginning stage of the germination, the seeds take up water rapidly and this results in swelling and softening of the seed coat at an optimum temperature. This stage is referred to as an Imbibition. It starts the growth process by activation of enzymes.

Design Lab involving Germination To germinate, a seed requires three things – water, oxygen, and a suitable temperature. In this lab you will test to see if your seeds have a water or oxygen or temperature requirement. You will pick ONE of these independent variables and test it. We will set this up in the form of a typical IB experiment.
