Electrodeposition: A technology for the future

Electrodeposition is a successful technique for producing thin films on a surface of a substrate by the action of electric current. The substrate material is immersed into an electrolyte solution containing a salt of the metal to be deposited and attached to the negative pole of a power supply, i.e., it acts as a cathode in the electrolytic cell [28] .

Electrophoretic deposition -

Wikipedia

The electrodeposition process is well suited to make films of metals such as copper, gold and nickel. The films can be made in any thickness from $\sim 1\mu\text{m}$ to $>100\mu\text{m}$. The deposition is best controlled when used with an external electrical potential, however, it requires electrical contact to the substrate when immersed in the liquid bath.

Electroplating is widely used in industry and decorative arts to improve the surface qualities of objects—such as resistance to abrasion and corrosion, lubricity, reflectivity, electrical conductivity, or appearance.

Electroplating - Wikipedia

...chemical methods of deposition are electrodeposition (or electroplating) and thermal oxidation. In the former the substrate is given an electrically conducting coating and placed in a liquid solution (electrolyte) containing metal ions, such as gold, copper, or nickel. A wide range of film thicknesses can be built.
