Introduction To Pseudo Differential Operators

The adjoint and transpose of a pseudo-differential operator is a pseudo-differential operator. If a differential operator of order m is (uniformly) elliptic (of order m) and invertible, then its inverse is a pseudo-differential operator of order $-m$, and its symbol can be calculated. This means that one can solve linear elliptic differential equations more or less explicitly by using the theory of pseudo-differential operators.

Obviously, (4.14) vanishes near $y = 0$.
