Character LCD Display Programming. Before you get involved with LCD display programming, its critical you first choose the correct LCD display for your product. All LCD modules can be classified into one of two categories: those requiring a controller/driver chip and those that don't. Displays requiring a controller/driver chip to interface with your product require a programmer to write software code, sometimes referred to as firmware, to connect the LCD to the end product.

IV Programming the LCD Part 1 - Instructions Now that the LCD is attached to port 3, we can start telling it what to display. We will use two different functions: one for giving instructions, and one for giving data. Let's first look at a data sheet for the LCD. Page 5 gives the instructions that the LCD understands.

Programming an LCD

From a programming perspective, the LCD screen consists of two individual LCDs, and each receives data individually. CS1 and CS2 allow the programmer to select which chip receives the delivery of the data in the data bus (DB0-DB7). When the chip receives the data, it sets the pixel for its half of the display.
