It would seem that 3D printing offers the ideal solution for Formula 1, producing parts on

demand in a fraction of the time it takes to manufacture a composite equivalent. Unfortunately, materials are limited to laser-sintered nylons and high-performance polymers such as polyetheretherketone (PEEK) and polyetherketoneketone (PEKK), which are not appropriate for components that have to withstand significant loads.

Composite Materials Technology In Formula 1 Motor Racing ...

A composite material is any material made by combining two or more materials in a structure whereby materials remain separate. This is done to produce materials with desirable properties such as high compressive strength, tensile strength, flexibility and hardness. The following are illustrative examples.

19 Types of Composite Material - Simpllicable

Composite materials should not be used. Likewise, the crankshaft and the camshafts have to be made from iron-based alloys, and pistons from an aluminum alloys. The valves are made from alloys based on nickel, cobalt, iron, or titanium. Wheels and tires - Formula 1 cars are required to have four uncovered wheels, made from the same metallic material. FIA stipulates the use of magnesium alloys for this purpose.

Materials Used In Formula One (F1) Cars

In 1985 Dallara made the first carbon fiber monocoques and in the following years the

same technology was extended to the wings and bodywork.

Composite materials are fabrics made with carbon fiber or other synthetic reinforcement that have been impregnated with resin. This resin solidifies if it undergoes a particular pressure and heat treatment.
