In classical potential theory, the central-force problem is to determine the motion of a particle in a single central potential field. A central force is a force that points from the particle directly towards a fixed point in space, the center, and whose magnitude only depends on the distance of the object to the center. In many important cases, the problem can be solved analytically, i.e., in terms of well-studied functions such as trigonometric functions. The solution of this problem is import

If  $F = f(r)\hat{r}$  only, then  $F \cdot \hat{\phi} = m(2r\dot{r}\dot{\phi} + r\ddot{\phi}) = 0$  !  $F_r = m(\ddot{r} - r\dot{\phi}^2) = f(r)$  !
