Regression Forecasts with Seasonality. We now turn our attention to the situation where we use regression with seasonal data: hourly, weekly, monthly, quarterly, etc. For hours we have 24 periods in a day, for months we have 12 periods in a year, etc. In particular, we are concerned with cases where the seasons influence the trend of the data (e.g. annual sales revenues are increasing, but revenues in June are lower than in September).

Seasonal Regression Forecasts | Real Statistics Using Excel

In time series data, seasonality is the presence of variations that occur at specific regular intervals less than a year, such as weekly, monthly, or quarterly. Seasonality may be caused by various factors, such as weather, vacation, and holidays and consists of periodic, repetitive, and generally regular and predictable patterns in the levels of a time series. Seasonal fluctuations in a time series can be contrasted with cyclical patterns. The latter occur when the data exhibits rises and falls

Seasonality - Wikipedia

In time series, the most famous proxy for this concept is stationarity, which refers to the statistical properties of a time series that remain static: the observations in a stationary time series are not dependent on time. The trend and seasonality will affect the value of the time series at different times.
