In this paper, we have extended some Tarski's theorems of the fixed point into ordered sets by new fixed point theorems. The original proof of fixed point for complete T-lattice is beautiful and elegant but nonconstructive and somewhat uninformative. In , we have given a constructive proof that generalizes the Tarski's version results. In this paper, we have given a structure to the set of fixed points of an increasing application on an ordered set and we have investigated the existence ...

Some Common Fixed Point Theorems in Partially Ordered Sets

The two most important results in fixed point theory, are without contest, the Banach contraction principle (BCP for short) and Tarski's fixed point theorem. Since their appearances, they were subject of many generalizations, either by extending the contractive condition for the B.C.P., or changing the structure of the space itself.

Lectures On Some Fixed Point Theorems Of Functional Analysis

The theoretical framework of fixed point theory has been an active research field over the last three decades. Of course, the Banach contraction mapping principle is the first important result on fixed points for contractive-type mappings. This well-known theorem, which is an essential tool in many branches of mathematical analysis, first appeared in an explicit form in Banach's thesis in 1922, where it was used to establish the existence of a solution for an integral equation.

A fixed point offis an element of $[0,1]$ at which the graph off intersects the 45° -line. Intuitively, it seems clear that iffis continuous then it must have a fixed point (its graph must cross or touch the 45° -line), and also that discontinuous functions may not have a fixed point.

Metric fixed point theory is one of the most important and fundamental area of analysis. Due to this a flood of research work have been generated from this area. As a part of this study generalisation of metric space becomes one of the most interesting topic in which many researchers have devoted and continued working.
