All About Kidney Transplant A

A kidney transplant is the transfer of a healthy kidney from one person into the body of a person who has little or no kidney function. The main role of the kidneys is to filter waste products from the blood and convert them to wee. If the kidneys lose this ability, waste products can build up, which is potentially life-threatening.

Kidney transplant - NHS

A kidney transplant is a surgical procedure that's done to treat kidney failure. The kidneys filter waste from the blood and remove it from the body through your urine. They also help

maintain your...

Kidney Transplant: Procedure, Risks, and Complications

Kidney transplantation is a procedure that places one healthy kidney from another person into your body to take over the work of your two failed kidneys. It is inserted into your lower abdomen and connected to an artery and vein in your pelvis.

Transplantation | Kidney Care UK

Kidney Transplant is one of the methods to do so. This involves a surgical procedure of “transferring” a healthy, matched kidney from a willing donor to “implant” it in the belly of the patient requiring the organ.

Kidney Transplant - Basics | All Things Kidney ~ Official

A kidney transplant is not put in the same place as a normal kidney. The old kidneys can normally be left in place. In some cases the old kidneys have to be removed before a transplant can take place. The normal position for a transplant is low down in the abdomen, well away from the position of normal kidneys.

What is a kidney transplant? | National Kidney Federation

Kidney transplantation is a life-extending procedure. The typical patient will live 10 to 15 years longer with a kidney transplant than if kept on dialysis. The increase in longevity is greater for younger patients, but even 75-year-old

recipients (the oldest group for which there is data) gain an average four more years of life.

Kidney transplantation - Wikipedia

A kidney transplant generally takes two to four hours. A kidney and pancreas transplant generally takes five to six hours. The new kidney will be put into the left or right groin. Your own kidneys are not usually removed during the operation.

Your guide to kidney transplantation

The operation The kidney transplant procedure involves 3 main stages: First, an incision (cut) is made in your lower abdomen (tummy), through which the donated kidney is put into place. Your

own kidneys will usually be left where they are, unless they're causing problems such as pain or infection.

Kidney transplant - What happens - NHS

When you get a kidney transplant, a healthy kidney is placed inside your body to do the work your own kidneys can no longer do. On the plus side, there are fewer limits on what you can eat and drink, but you should follow a heart-healthy diet. Your health and energy should improve.
