Dermatological Signs of Systemic Disease - 5th Edition

Skin changes can often be the first sign of a deeper problem including an internal malignancy. Signs of skin disease may precede, occur with, or follow the detection of associated cancer. These skin diseases can be a feature of undiagnosed cancer and may be the prompt for a thorough examination in patients. Or in a patient whose cancer is in remission, these skin diseases may be the initial sign of cancer recurring.

Cutaneous markers of internal malignancy | DermNet NZ

The skin may reflect signs of systemic diseases, useful for diagnosis, or suffer from a complication of disease or its treatment. Here are links to pages about the dermatological manifestations of non-infectious internal diseases: immune, autoimmune diseases and rheumatic diseases; genetic, metabolic, endocrine and nutritional states; internal malignancy; haematological diseases; psychiatric states; and drug eruptions.

Skin signs and systemic disease | DermNet NZ

Seborrheic dermatitis (Fig. 1) is a common chronic, superficial inflammatory disease of the scalp, face (especially the eyebrows and nasolabial folds), ears, and central chest, affecting 2% to 5% of the population. Clinically, the disease is characterized by thin erythematous plaques, often with a fine, greasy scale.

Dermatologic Signs of Systemic Disease - Cleveland Clinic

For an undertaking with such a broad definition, this book is compressed into a rather slender volume. In spite of this brevity, Dermatological Signs of Internal Disease turns out to be remarkably comprehensive in that it largely covers the same material found in Braverman's Skin Signs of Systemic Disease. This editorial legerdemain is accomplished by employing a style that resembles the ...
