Many advanced control techniques have been applied to concentrating solar power systems to overcome the problems caused by the sporadic nature of solar radiation (Camacho et al., 2007). These techniques are generally focused on controlling the solar collector outlet temperature by varying the heat transfer fluid (HTF) flow rate (the manipulated variable) through the collector field (Silva et al., 1996).

PVPC is the advanced SCADA solution to monitor and control solar PV plants. PVPC performs real-time data acquisition of plant field devices such as inverters, trackers, weather stations, strings or the substation, and stores the information either in a local central server or in the cloud. Likewise, it allows integration with third parties such as the country’s electricity grid operator, the SCADA of the substation or the customer’s remote-control center.
