In mathematics, nonlinear programming is the process of solving an optimization problem where some of the constraints or the objective function are nonlinear. An optimization problem is one of calculation of the extrema of an objective function over a set of unknown real variables and conditional to the satisfaction of a system of equalities and inequalities, collectively termed constraints. It is the sub-field of mathematical optimization that deals with problems that are not linear.

- Solutions of linear differential equations are relatively easier and general solutions exist. For nonlinear equations, in most cases, the general solution does not exist and the solution may be problem specific. This makes the solution much more difficult than the linear equations.

Difference Between Linear and Nonlinear Differential ...

A nonlinear program (NLP) is similar to a linear program in that it is composed of an objective function, general constraints, and variable bounds. The difference is that a nonlinear program includes at least one nonlinear function, which could be the objective function, or some or all of the constraints. Many real systems are inherently nonlinear, e.g. modelling the drop in signal

$dy_2/dt = \tau_2 y_1 + (\pi_2 - \tau_2) \sin(\pi t)$ The characteristic solution to these equations is given by: $y_1(t) = \sin(\pi t) + c_1 \exp(-\tau t) + c_2 \exp(\tau t)$ $y_2(t) = \pi \cos(\pi t) - c_1 \tau \exp(-\tau t) + c_2 \tau \exp(\tau t)$ Both c_1 and c_2 can be set to zero by either of the following equivalent conditions: IVP $y_1(0) = 0$, $y_2(0) = \pi$ BVP $y_1(0) = 0$, $y_1(1) = 0$. 32.

Nonlinear Programming: Concepts, Algorithms and Applications

Linear programming (LP, also called linear optimization) is a method to achieve the best outcome (such as maximum profit or lowest cost) in a mathematical model whose requirements are represented by linear relationships. Linear programming is a special case of mathematical programming (also known as mathematical optimization).. More formally, linear programming is a technique for the ...

Linear programming - Wikipedia

As nonlinear dynamical equations are difficult to solve, nonlinear systems are commonly approximated by linear equations (linearization). This works well up to some accuracy and some range for the input values, but some interesting phenomena such as solitons , chaos , [9] and singularities are hidden by linearization.
