CHEMLAB 11. Hydrated crystals. Hydrates are compounds that incorporate water molecules in their crystalline structures. The ratio of moles of water to one mole of that compounds is a small whole number. For example, in the hydrated compound copper (II) sulfate pentahydrate ($\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$), the ratio is 5:1. The ratio of moles of water to one mole of a hydrate can be determined experimentally by heating the hydrate to remove water.
