A prediction of reliability is an important element in the process of selecting equipment for use by telecommunications service

providers and other buyers of electronic equipment, and it is essential during the design stage of engineering systems life cycle. Reliability is a measure of the frequency of equipment failures as a function of time. Reliability has a major impact on maintenance and repair costs and on the continuity of service. Every product has a failure rate, λ which is the ...

Reliability prediction for electronic components - Wikipedia

Reliability is a probability that a product will operate satisfactorily for a required amount of time under stated conditions. Reliability is commonly quantified in terms of MTBF. Mean Time Between Failures (or MTBF) is arithmetic mean value of session time between two failures where the system is functional.

Reliability estimation for electronic designs

Reliability is related to weaknesses or faults in manufacturing processes (infant mortalities), weaknesses in process control (random failures) or natural wearout of electronics devices, components, boards or systems. It involves failure due to some physical phenomena such as insufficient joint area, corrosion, moisture ingress, stress, creep or fatigue.

How do I test for reliability of my electronics products ...

Reliability of Electronic Components - A Practical Guide ...

Electronic components have a wide range of failure modes. These can be classified in various ways, such as by time or cause. Failures can be caused by excess temperature, excess current or voltage, ionizing radiation, mechanical shock, stress or impact, and many other causes. In semiconductor devices, problems in the device package may cause failures due to contamination,

mechanical stress of the device, or open or short circuits. Failures most commonly occur near the beginning and near the end

Failure of electronic components - Wikipedia

This paper describes the problem of increasing the reliability of electronic components (EC) used for the fabrication of high-tech products. Two main ways of solving the problem are considered based on analysis of published data. One approach is rejection of EC at the input control using special testing methods combined with burn-in test program.
