Concrete Columns

Concrete Jacketing is pivotal for strengthening to add or restore ultimate load capacity of reinforced concrete columns. It is used for seismic retrofitting, supporting additional live load or dead load that is not included in the original design, to relieve stresses generated by design or construction errors, or to restore original load capacity to damaged structural elements.

CHAPTER 2: REINFORCED CONCRETE JACKETING RETROFIT METHOD

Reinforced concrete jacketing is a traditional and one of the most common methods to retrofit and/or repair

reinforced concrete columns. The additional cross-section area helps the column transfer more load while providing additional confinement. Reinforced concrete jackets

Retrofit of Reinforced Concrete Columns

Seismic Retrofitting Techniques are required for concrete constructions which are vulnerable to damage and failures by seismic forces. In the past thirty years, moderate to severe earthquakes occurs around the world every year. Such events lead to damage to the concrete structures as well as failures.

Retrofit for Concrete - Detailed Description

Retrofitting of Existing RCC Buildings by Jacketing Jacketing of column is the method of adding transverse and longitudinal reinforcement around the existing columns in a building. The main advantage of column jacketing is that it increases the load capacity of the building by distributing the weight uniformly.

Retrofitting of Existing RCC Buildings by Jacketing ...

Concrete or steel jacketing have been a popular retrofit technique until the advent of composite materials such as Carbon fiber-reinforced polymer (FRP). Composite materials such as carbon FRP and aramic FRP have been extensively tested for use in seismic retrofit with some success.

Seismic Assessment And Retrofit Of Reinforced Concrete Columns

(Refer Figure 6.2) FRP retrofitting has been used with bridge and building structures to strengthen static and quasi-static loads (such as increases in dead or live load in a bridge or building structure), and for dynamic loads (such

as strengthening for improved seismic or blast response in a bridge or building structure).

Seismic Assessment and Retrofit of Reinforced Concrete Columns

In 2003 it was investigated the retrofit of square concrete columns with Carbon Fiber Reinforced Polymer (CFRP) for seismic resistance. It was found that added confinement with CFRP at critical locations enhanced ductility, energy dissipation capacity and strength of all substandard members. 5 / 5 (2 votes)

Retrofitting of Columns | CTech-LLC

The concrete column core breaks off rough, so we use a 4-1/2-inch grinder with a diamond blade to smooth the ends. While each column was still held in the vise, we clamped a pair of 36-inch-

long 2x4 crossties to it, about 12 inches up from the bottom. I like to make the clamps with Dayton threaded rod, which is used to connect concrete forms.

Retrofitting a Lally Column | JLC Online

Retrofitting methods addressed in this study include steel jacketing of columns, foundation, and abutment retrofit. The corresponding parameters representing structural elements include linear foundation springs, nonlinear abutment

springs, and various column-jacketing plans.

Effects of Retrofitting Applications on Reinforced ...

These three retrofitting techniques are mainly dealt in this journal and that too for existing columns. Jacketing of columns consists of added concrete with longitudinal and transverse reinforcement around the existing columns.
