Remote sensing is the method of acquiring information about an object or phenomenon without making physical contact with the object and thus opposite to in situ observation. In day to day use, the term generally refers to the use of aerial sensor technologies to detect and classify objects on Earth (on the surface, atmosphere and oceans) by means of transmitted signals (e.g. electromagnetic radiation).

Remote Sensing - Types and how it works

Remote sensing is the acquisition of information about an object or phenomenon without making physical contact with the object and thus in contrast to on-site observation, especially the Earth. Remote sensing is used in numerous fields, including geography, land surveying and most Earth

science disciplines; it also has military, intelligence, commercial, economic, planning, and humanitarian applications. In current usage, the term "remote sensing" generally refers to the use of satellite or airc

Remote sensing is one of a suite of geospatial technologies that are having a growing impact in a wide variety of areas from commerce to science to public policy. The field of remote sensing evolved from the interpretation of aerial photographs to the analysis of satellite imagery, and from local area studies to global analyses, with advances in sensor system technologies and digital computing.
