Book: Data Classification: Algorithms and Applications

Classification Algorithms could be broadly classified as the following: Linear Classifiers. Logistic regression; Naive Bayes classifier; Fisher's linear discriminant; Support vector machines. Least squares support vector machines; Quadratic classifiers; Kernel estimation. k-nearest neighbor ; Decision trees. Random forests; Neural networks; Learning vector quantization; Examples of a few popular Classification Algorithms are given below.

Classification Algorithms | Types of Classification ...

In clustering the idea is not to predict the target class as like classification , it's more ever trying to group the similar kind of things by considering the most satisfied condition all the items in the same group should be similar and no two different group items should not be similar. To group the similar kind of items in clustering, different similarity measures could be used.

classification and clustering algorithms

Data structures serve as the basis for abstract data types (ADT).

The ADT defines the logical form of the data type. The data structure implements the physical form of the data type. Different types of data structures are suited to different kinds of applications, and some are highly specialized to specific tasks.

Data structure - Wikipedia

Machine learning (ML) is the study of computer algorithms that improve automatically through experience. It is seen as a subset of artificial intelligence. Machine learning algorithms build a model based on sample data, known as "training data", in order to make predictions or decisions without being explicitly programmed to do so. Machine learning algorithms are used in a wide variety of ...
