Overview - Tissue by Imtiaz Dharker - GCSE English ...

A tissue membrane is a thin layer or sheet of cells that covers the outside of the body (for example, skin), the organs (for example, pericardium), internal passageways that lead to the exterior of the body (for example, abdominal mesenteries), and the lining of the moveable joint cavities. There are two basic types of tissue membranes: connective tissue and epithelial membranes (Figure 3).

Types of Tissues | Anatomy and

Physiology I

There are four basic tissue types defined by their morphology and function: epithelial tissue, connective tissue, muscle tissue, and nervous tissue. Epithelial tissue creates protective boundaries and is involved in the diffusion of ions and molecules. Connective tissue underlies and supports other tissue types.

Types of tissue: Structure and function | Kenhub

Epithelium consists of closely packed, flattened cells that make up the inside or outside lining of body areas. There is little intercellular material. The tissue is avascular, meaning without blood vessels. Nutrient and waste exchange occurs

through neighboring connective tissues by diffusion. The upper surface of epithelium is free, or exposed to the outside of the body or to an internal body cavity.
