It consists of three distinct regions: the hindbrain, the midbrain, and the forebrain. Although the brain of higher vertebrates undergoes considerable modification during embryonic development, these three regions are still discernible. The hindbrain is composed of the medulla oblongata and the pons. The medulla transmits signals between the spinal cord and the higher parts of the brain; it also controls such autonomic functions as heartbeat and respiration.

The Mozart Effect could be completely non-existent, according to a new neuroscientific study in America. In a new study by Nicholas Spitzer at the University of California, it has been suggested that listening to classical music has no effect on the brain's capacity to learn and be active. This goes against the popular idea of 'The Mozart Effect', which suggests that

listening to classical music (and Mozart in particular) can increase brain activity of developing babies and adults alike.
