Documents and search queries are transformed into vectors, and the similarity or distance between the vectors is used as a measure of relevance. This model gives an understanding of how lexical search works as opposed to semantic search. It is essential for lexical search that a document

contains words mentioned in a search query.

How search engines understand human language

A Turing machine is a mathematical model of computation that defines an abstract machine, which manipulates symbols on a strip of tape according to a table of rules. Despite the model's simplicity, given any computer algorithm, a Turing machine capable of simulating that algorithm's logic can be constructed.. The machine operates on an infinite memory tape divided into discrete "cells".
