One of the first
ultradian rhythms to be
studied in humans was
the REM-NREM sleep
cycle, which has a
period of about 90-min,
and occurs 3-5 times
in the average sleep
episode (Moszczynski
and Murray, 2012).
This rhythm is
composed of the
synchronous activity of

a number of different
processes including
occulomotor activity,
muscle tone,
dominance of the
autonomic nervous
system, brain electrical
activity and energy
utilization.

A prominent ultradian
clock is the
circahoralian (about 1
h period) that is

indicated as occurring in many lower eukaryotes and is always of shorter duration than the cell division cycle, as shown in the figure. (Reproduced from Lloyd and Rossi (2008) in *Ultradian Rhythms from Molecules to Mind*).

Ultradian Rhythms in Life Processes by David Lloyd, Ernest ...

Recently, ultradian

rhythms of arousal lasting approximately 4 hours were attributed to the dopaminergic system in mammals. When the dopaminergic system is perturbed either by use of drugs or by genetic disruption,

these 4 hours rhythms can lengthen significantly into the infradian (> 24 h) range, sometimes even lasting for days (> 110 h) when methamphetamines are provided.
