In economic terms, electricity is a commodity capable of being bought, sold, and traded. An electricity market is a system enabling purchases, through bids to buy; sales, through offers to sell; and short-term trading, generally in the form of financial or obligation swaps. Bids and offers use supply and demand principles to set the price. Long-term trades are contracts similar to power purchase agreements and generally considered private bi-lateral transactions between counterparties. Wholesale

Energy economics is a broad scientific subject area which includes topics related to supply and use of energy in societies. Due to diversity of issues and methods applied and shared with a number of academic disciplines, energy economics does not present itself as a self-contained academic

discipline, but it is an applied subdiscipline of economics. From the list of main topics of economics, some relate strongly to energy economics: Computable general equilibrium Econometrics Environmental econo

Energy economics - Wikipedia

While the electricity market is cleared based on the supply (generators) and the demand (load), the participation by the generators is the predominant activity. Much focus is put on the supply side (i.e., how generators offer), which generators have market power, and whether they make a sufficient level of revenue from various electricity markets.

A proposed USD4 billion production-linked incentive scheme aims to propel local battery manufacturing. But the big picture may still be missing. It will remain a half-baked effort unless the entire supply chain, not just the battery-cell suppliers, is roped in. Also, the domestic auto industry needs to get serious about EVs and slowly move from its obsession with low costs.
