Complex Reservoir Fluid Characterisation

Complex reservoir characterization using static low-resolution surveys can mask aberrations and hide detailed aspects of subsurface dynamics and well conditions. However, CoViz 4D has the necessary capabilities to merge multi-disciplinary data into a central system, where geoscientists and

engineers can better understand the data.

Overcoming the Challenge of Complex Reservoir Characterization

The modelling incorporates fluid displacement behavior characterized by a force balance between the gas cap expansion, bottom aquifer movement, and multiphase viscous flow in the reservoirs.

SPE Workshop Complex Reservoir Fluid Characterisation ...

Characterizing a reservoir by updating of both static and dynamic reservoir properties during the life of the field is referred to as dynamic reservoir characterization. Dynamic reservoir characterization is discussed in Chapter 7, dealing with time lapse or 4D geophysical data and reservoir monitoring. This chapter, however, focuses on static reservoir characterization.

In this workshop, we will cover the most recent developments especially in the context of capturing the behaviour of complex reservoir fluids. Particularly, the focus will be on the challenging questions of when and what is needed for fluid properties under various conditions, of course within the constraint of the current environment.

SPE Workshop: Complex Reservoir Fluids

Bulk fluid characterization with laboratory PVT reports determines the bulk fluid parameters for the PR-C EOS. The confinement parameters for the PR-C EOS are from the reported database (Luo et al. 2018a). Further, multi-scale phase equilibria are calculated by minimizing the free energy. ... complex reservoir, confinement effect, cumulative ...

Fluid Characterization | SPE

At the prevailing reservoir pressure, the swelling factor with hydrocarbon gas is four times higher than for nitrogen. Furthermore, the reservoir fluid density increases during swelling with nitrogen, whereas it decreases as a result of hydrocarbon gas swelling. The same trend is observed for viscosity.

Thus, the challenges of reservoir fluid characterization include overcoming the presence of freshwater in heavy oil and taking into account oil

viscosity and permeability, accurate production, and operational cost estimates, as well as bringing in production on time. In fact, success with heavy oil depends as much on understanding the fluid properties of the reservoir as it does on knowing the geology of the reservoir itself.
