Extraneous Solution Examples

An extraneous solution is a root of a transformed equation that is not a root of the original equation because it was excluded from the domain of the original equation. Example 1: Solve for x , $\frac{1}{x-2} + \frac{1}{x+2} = \frac{4}{(x-2)(x+2)}$. $\frac{1}{x-2} + \frac{1}{x+2} = \frac{4}{(x-2)(x+2)}$

So let's just see the example of squaring, and then we're going to see it in an actual scenario where you're dealing with an extraneous solution. So we know, for example, that if a is equal to b , I could square both sides and then a squared is going to be equal to b squared. But the other way is not true.

So the equation has no solution at all! $x = 1$ is called an EXTRANEIOUS solution, which is really not a solution at all. Example 2: When you multiply through by the LCD and solve the

resulting quadratic equation, you get solutions $x=2$ and $x=1$. However when we try to check the solution $x=2$, it causes the first and last denominators to become 0, which is undefined.

SOLUTION: What is an extraneous solutions?

Two minus six which is negative four, so this does not work out. X equals negative three is not a solution to this, but it is a solution for this and it is a solution to this quadratic right over here. So D equals two makes X equal negative three, an extraneous solution for this equation.

Equation that has a specific extraneous solution (video ...

However, the squaring operation is what creates the extraneous solutions. Remember some basic mathematics, that both a negative and a positive number, when squared, will give the same result. For example, $(-)$ and both give the answer of $.$ However, both the negative and positive numbers might not be solutions to whatever problem you are solving.

How to Solve Radical Equations with Extraneous Solutions ...

To tell if a "solution" is extraneous you need to go back to the original problem and check to see if it is actually a solution. One example might be $\frac{1}{(x-1)} = \frac{x}{(x^2-1)}$ Solving this algebraically gives $x = 1$. But this can't be a solution as both denominators are zero when x is 1.

Extraneous solutions

Another square root is negative 1.5. So it's 1.5. And then,

according to this, this should be equal to 2 times 2.25 is 4.5 minus 6. Now, is this true? This is telling us that 1.5 is equal to negative 1.5. This is not true. 2.5 did not work for this radical equation. We call this an extraneous solution. So 2.25 is an extraneous solution.

Intro to square-root equations & extraneous solutions ...

Extraneous solutions may look like the real solution, but you can identify them because they will not create a true statement when substituted back into the original equation. This is one of the reasons why checking your work is so important—if you do not check your answers by substituting them back into the original equation, you may be ...

Solving Radical Equations

Radical equations with square roots often have extraneous solutions because through the process of solving these equations we must square both sides of the equation. However, the process of squaring both sides is not a “reversible” operation. For instance, $(-2)^2 = 4$, but $4 \neq -2$. We can't get back to -2 .

Radical Equations with Extraneous Solutions

Therefore, the solution $x = -2$ is extraneous and is not valid, and the original equation has no solution. For this specific example, it could be recognized that (for the value of $x = -2$), the operation of multiplying by $(x - 2)(x + 2)$ would be a multiplication by 0.

Extraneous and missing solutions - Wikipedia

Example: solve $x^2 - 3 = 2x$
 $x^2 - 3 - 2x = 0$
 $x^2 - 2x - 3 = 0$
 $(x - 3)(x + 1) = 0$
 $x = 3$ or $x = -1$
 Since “x” cannot equal 3, the only solution is $x = -1$
 “x” cannot equal 3 Multiply both sides of the equation

SOLVING RATIONAL EQUATIONS EXAMPLES

Extraneous variables are all variables, which are not the independent variable, but could affect the results of the experiment. The researcher wants to make sure that it is the manipulation of the independent variable that has an effect on the dependent variable.

Extraneous Variable | Simply Psychology

Example. Solve. $\sqrt{x-3} = 5$
 $x - 3 = 25$
 $x = 28$
 Show Solution. Add 3 to both sides to isolate the variable term on the left side of the equation.
 $\sqrt{x - 3} = 5 + 3 + 3$
 $\sqrt{x} = 8$
 Square both sides to remove the radical since $(\sqrt{x})^2 = x$
 $x = 64$

where $x = 7$ is the solution to the problem, and $x = -4$ is an extraneous solution because it is not pertinent to the problem. Tparameter (talk) 17:46, 19 January 2008 (UTC) No, this is not a suitable example of an extraneous solution. Since $x = -4$ can satisfy the equation $x^2 - 3x + 5 = 0$, only does not satisfy the domain that sets manually.
