Blood pressure management in stroke: Five new things

Proper management of blood pressure (BP) is an important theme for the acute treatment and prevention of first and recurrent stroke [1, 2]. During the past 5–10 years, a number of new trials and guidance statements on the prevention and treatment of stroke have been published.

Management of blood pressure in stroke - ScienceDirect

At presentation, 60% to 80% of patients with acute ischemic stroke (AIS) have systolic blood pressures (SBP) over 140 mm Hg. 1-3 Patients with preexisting hypertension may have SBP magnitudes higher. 4,5 Commonly, this acute hypertensive response abates within 24 hours, returning to the patient's previous baseline over several days. 6 The return to baseline and rapid normalization of BP after arterial recanalization 7,8 both underscore the physiologic role of the acute hypertensive response.

Stroke Snapshot: Blood Pressure Management After Acute ...

The American Stroke Association recommends <160 mmHg of SBP, the Neurocritical Care Society says <110 mmHg of mean arterial pressure, ^{28,29} while the European Stroke Organisation found moderate-quality evidence to support weak recommendations for intensive lowering of SBP to <140 mmHg within 6 hours of intracranial hemorrhagic stroke onset. ³⁵. Blood Pressure Management to Prevent Stroke Recurrence

Hypertension and Stroke: Update on Treatment | ECR Journal

Blood pressure management in acute stroke Management of blood pressure in AIS must balance multiple factors including elevated pressures improving tissue perfusion but also increasing the risk of hemorrhage or secondary damage to already infarcted areas of brain.

Management of acute ischemic stroke | The BMJ

High blood pressure puts an extra strain on all the blood vessels in your body. This can make a stroke due to a clot (ischaemic stroke) more likely, because high blood pressure damages your blood vessels and makes them become stiffer and more narrow. This can lead to clots forming and travelling to the brain, causing a stroke.

High Blood Pressure and Stroke | Stroke Association

have a systolic blood pressure between 150 and 220 mmHg. Aim for a systolic blood pressure target of 130 to 140 mmHg within 1 hour of starting treatment and maintain this blood pressure for at least 7 days.

Recommendations | Stroke and transient ischaemic attack in ...

Following the acute phase of ischaemic stroke, blood pressure should be measured and treatment initiated to achieve a target blood pressure of <130/80 mmHg. Beta-blockers should not be used in the management of hypertension following a stroke, unless they are indicated for a co-existing condition.

Stroke | Treatment summary | BNF content published by NICE

Intravenous CCBs are widely used for the hyperacute management of high BP after stroke in spite of neutral results in ICH (nicardipine in ATACH-2 13) and some negative results in IS (nimodipine in Bridgers et al, 14 INWEST 15).

Blood Pressure in Acute Stroke | Stroke

Background A. BP management in acute ischemic stroke (onset to 72 hours) 1. For patients with ischemic stroke not eligible for thrombolytic therapy, treatment of hypertension in the setting of acute ischemic stroke or transient ischemic attack should not be routinely undertaken (Grade D; revised wording). Extreme BP increases (e.g., SBP >220 mmHg or DBP >120 mmHg) may be treated to reduce the ...
