Statistical Methods For Dynamic Treatment

Statistical Methods for Dynamic Treatment Regimes shares state of the art of statistical methods developed to address questions of estimation and inference for dynamic treatment regimes, a branch of personalized medicine. This volume demonstrates these methods with their conceptual underpinnings and illustration through analysis of real and simulated data.

Value maximization methods are based on forming an estimator of $V(d) = E d Y$ and then directly maximizing this estimator over d in some class of DTRs, say D . Value maximization methods include outcome weighted learning [9, 14], augmented value maximization [10, 12, 13], and structural mean models . We give a version of outcome weighted
