Machines deliver a certain type of movement to a desired location from an input force applied somewhere else. Some machines simply convert one type of motion to another type (rotary to linear). While there is a seemingly endless variety of machines, they are all based upon simple machines. Simple machines include inclined planes, levers, wheel and axle, pulleys, and screws. It is important to remember that all machines are limited in their efficiency.

Simple machines can be used to turn a small force into a bigger force; this means we can use these machines to accomplish things more easily. Examples of simple machines are levers (which give us extra pushing or pulling force and help us lift great weights), gears (different-sized cogs which work together and give a machine extra force or speed) and pulleys (wheels and ropes used together to lift heavy objects).
