Interpreting Weather Station Models. Computers do much of the work that a meteorologist, scientists who study the weather, needs to do. The computers take weather data from thousands of weather stations across the world. The data is interpreted and weather forecasts are made. Before computers were used for interpreting meteorological data, scientists had to take the data and create the weather interpretations.

Igneous Rock Textures | Earth

Science

Upwarped mountains are created when the crust is pushed up by forces within the Earth. Over time sedimentary rock erodes leaving behind the igneous and metamorphic rock. These igneous and metamorphic rocks weather at different rates causing sharp peaks and ridges.

Landforms | Earth Science

There needs to be a reason we care about minerals when discussing them in Earth Science classes. One of the main reasons it is important to understand what minerals are and what they are made out of, is so that humans can mine them for some use; many times an industrial use.
