The brake pedal pushes a rod that in turn pushes the master-cylinder piston. But the brake pedal also works on a set of air valves, and there is a large rubber diaphragm connected to the master-cylinder piston. When the brakes are off, both sides of the diaphragm are exposed to the vacuum from the manifold.

How the braking system works | How a Car Works

Special brake pads, held in place by the braking mechanism, squeeze the rotor causing the wheel to slow down. Cable Disc Brakes,as the name implies work with a cable attached to the brake lever on the handle bars. This is the easiest type to maintain and is less expensive than the hydraulic type. For most riders it provides plenty of stopping ...

Understanding Bicycle Braking Systems | Infolific

The brake shoes are consumable wearing parts. Each time your caravan brakes are applied brake dust is created from the shoes contacting against the interior surface of the drum. As previously mentioned, caravan brakes are not ventilated. Hence all that brake dust stays within the brake drum and the area needs to be cleaned during a service.
