NON-CONTACT RADAR FLOW MEASURING SYSTEM

Non-contact level and flow velocity measurement is achieved using up-to-date radar technology, whereby the level is measured by means of ultrasonic or alternatively by radar technology. The series consists of the different types SQ-U and SQ-8R according to the level to be measured.

Non-contact flow measurement for wastewater, sewage ...

Non-contact Radars are initially calibrated in factory with an initial dielectric value (e.g. 1.6). Dry calibration: Zero and Full scale values are adjusted manually. These scale values represents the minimum and maximum level to be measured. These settings can be made in-situ or not.

Non Contact RADAR Level Transmitter Principle, Limitations ...

In continuous non-contact level measurement with radar, the sensor sends microwave signals towards the medium from above. The surface of the medium reflects the signals back in the direction of the sensor. Using the received microwave signals, the sensor determines the distance to the product surface and calculates the level from it.

A non-contact radar level sensor uses the Time-of-Flight (ToF) principle to measure level continuously. This measuring principle is almost coextensive with non-contact radar level measurement, but not quite. If you would like to know more about it, read our guide. In any case, here's a quick recap:

Non-contact level sensors: types and applications | Visaya

Radar level measurement uses Non-contacting radar technology for Continuous level measurement. Liquids and solids are commonly measured with this measuring technique. Radar level transmitters use radar technology to perform non-contact continuous level measurement. The radar level

indicator converts the level into an electrical signal.
