When the roller coaster cart travels down hill it accelerates (the velocity increases), and when the roller coaster cart travels up hill it decelerates (the velocity decreases). We are able to calculate the velocity of the roller coaster cart at any time by using the formulas given on the Motion page. The mass of the roller coaster cart will remain constant if the cart is empty; however, as people will be riding into the cart, the mass of the people also needs to be taken into account.

Gravity applies a constant downward force on the cars. The coaster tracks serve to channel this force — they control the way the coaster cars fall. If the tracks slope down, gravity pulls the front of the car toward the ground, so it accelerates. If the tracks tilt up, gravity applies a downward force on the back of the coaster, so it decelerates.
