Multiprocessor System On Chip Hardware

A multiprocessor system on a chip is a system on a chip which includes multiple microprocessors. As such, it is a multi-core system on a chip. MPSoCs usually targeted for embedded applications. It is used by platforms that contain multiple, usually heterogeneous, processing elements with specific functionalities reflecting the need of the expected application domain, a memory hierarchy and I/O components. All these components are linked to each other by an on-chip interconnect, such as buses and

Multiprocessor system on a chip - Wikipedia

With technology advances and the emergence of new fabrication and VLSI technologies, current and future chip multiprocessors (CMPs) are expected to have tens to hundreds of processing elements and Gigabytes of on-chip caches, which are connected by a high bandwidth network-on-chip (NoC). Unfortunately, due to limited power budget of a computing system, specially for its processing element(s), it is impossible to keep all cores, caches, and network elements working at highest voltage level ...

A multiprocessor systems-on-chip (MPSoC) is a system-on-chip (SoC) that contains multiple instruction-set processors (CPUs). The fact that an MPSoC is a multiprocessor means that software design is an inherent part of the overall chip design. In an MPSoC, either hardware or software can be used to solve a problem.

...

A multi-core processor is a computer processor integrated circuit with two or more separate processing units, called cores, each of which reads and executes program instructions, as if the computer had several processors. The instructions are ordinary CPU instructions but the single processor can run instructions on separate cores at the same time, increasing overall speed for programs that support multithreading or other parallel computing techniques. Manufacturers typically integrate the cores

Multi-core processor - Wikipedia

Symmetric multiprocessing (SMP) involves a multiprocessor computer hardware and software architecture where two or more identical processors are connected to a single, shared main memory, have full access to all input and output devices, and are controlled by a single operating system instance that treats all processors equally, reserving none for special purposes.
