In the first lecture of the second part of this course we move more to consider properties of fields. We introduce three field operators which reveal interesting collective field properties, viz. the gradient of a scalar field, the divergence of a vector field, and the curl of a vector field. There are two points to get over about each: The mechanics of taking the grad, div or curl, for which you will need to brush up your multivariate calculus.

Lecture 5 Vector Operators: Grad, Div and Curl

In vector calculus, div, grad and curl are standard differentiation operations on scalar or vector fields, resulting in a scalar or vector field. Scalar and Vector fields. A scalar field is one that has a

single value associated with each point in the domain. A simple example is a temperature distribution; every point in the domain has a single value.
