Solution : the distance x meters traveled by a vehicle in time t seconds. x = 20 t - (5/3)t<sup>2</sup>. To find the speed of the vehicle, differentiate it with respect to "t". dx/dt = 20 (1) - (5/3) (2t) = 20 - (10 t/3) the speed of the vehicle (in km/hr) at the instant the brakes are applied. t = 0.

The meaning of differentiation is the process of determining the derivative of a function at any point. Linear and Non-Linear Functions. Functions are generally classified in two categories under Calculus,

namely: (i) Linear functions (ii) Non-linear functions. A linear function varies with a constant rate through its domain. Therefore, the overall rate of change of the function is the same as the rate of change of a function at any point.
