Since, the FID signal collected after one pulse, may be stored and averaged with the FID's from many other identical pulses prior to the Fourier transform, the NMR signal strength from a small sample may be enhanced to provide a useable spectrum. This has been essential to acquiring spectra from low abundance isotopes, such as ^{13}C . In practice, the pulse FT experiment has proven so versatile that many variations of the technique, suited to special purposes,

It can be calculated if the pulse length for a nutation of $=90^\circ$ is known: $B_1/2 = 1/(4 \cdot (90^\circ))$.

Fourier-transform spectroscopy is a measurement technique whereby spectra are collected based on measurements of the coherence of a radiative source, using time-domain or space-domain measurements of the electromagnetic radiation or other type of radiation. It can be applied to a variety of types of spectroscopy including optical spectroscopy, infrared spectroscopy (FTIR, FT-NIRS), nuclear magnetic resonance (NMR) and magnetic resonance spectroscopic imaging (MRSI), mass spectrometry and ...

Wikipedia

This Demonstration illustrates the relationship between a rectangular pulse signal and its Fourier transform. There are three parameters that define a rectangular pulse: its height, width in seconds, and center. Mathematically, a rectangular pulse delayed by seconds is defined as and its Fourier transform or spectrum is defined as.

FT-NMR FTNMR or pulse NMR, the sample is irradiated periodically with brief, highly intense pulses of radio- frequency radiation, following which the free induction decay signal - a characteristic radio-

frequency emission signal stimulated by the irradiation - is recorded as a function of time.

FT NMR - SlideShare

"Modern pulse NMR is performed exclusively in the Fourier Transform mode. Of course it is useful to appreciate the advantages of the transform, and particularly the spectacular results that can be achieved by applying it in more than one dimension, but it is also essential to understand the limitations imposed by digital signal analysis.

Basic NMR Concepts - Boston University

In Fourier transform NMR spectroscopy and imaging, a pulse sequence describes a series of radio

frequency pulses applied to the sample, such that the free induction decay is related to the characteristic frequencies of the desired signals. After applying a Fourier transform, the signal can be represented in the frequency domain as the NMR spectrum.
