(PDF) Anaerobic Biotechnology - ResearchGate The objective of this review was to conduct a comprehensive literature survey to identify the parameters that govern the permeate flux in an anaerobic membrane bioreactor (AnMBR) treating municipal wastewater. Based on the survey, research to date indicates that the optimal membrane system for an AnMBR consists of an organic, hydrophilic, and negatively charged membrane with a pore size of approximately 0.1 µm.

Parameters Governing Permeate Flux in an Anaerobic ... Bioremediation is a process used to treat contaminated media, including water, soil and subsurface material, by altering environmental conditions to stimulate growth of microorganisms and degrade the target pollutants. In many cases, bioremediation is less expensive and more sustainable than other remediation alternatives. Biological treatment is a similar approach used to treat wastes ...

Bioremediation - Wikipedia BACKGROUND: This work is focused on the anaerobic biodegradation of wastewater from used industrial oils (UIO) recovery using a bench-scale expanded granular sludge bed reactor (EGSB) at room temperature. RESULTS: Biodegradability tests showed that this wastewater can be partially biodegraded under anaerobic conditions at mesophilic temperature. Low concentrations of wastewater caused an incremented specific activity of the acetoclastic and the hydrogenotrophic methanogens.

Anaerobic treatment of wastewater from used industrial oil ... The emergence of anaerobic treatment and membrane separation makes AnMBR a good choice for various stream treatment, especially for industrial wastewater with the high strength. Also, AnMBR has attracted a lot of interest in producing energy in the form of biogas, which can be further used as an emerging approach to energy recovery from wastewater.
