You will be using a version called PSpice A/D. There are three steps to using this software. 1. Draw an electronic circuit on the computer using Capture. 2. Simulate it with PSpice using specific models for your devices. 3. Analyse its behaviour with Probe, which can produce a range of plots. Historically this was a separate application but it is now integrated with PSpice.

PSPICE is a circuit analysis tool that allows the user to simulate a circuit and extract key voltages and currents. Information is entered into PSPICE via one of two methods; they are a typed 'Net List' or by designing a visual a schematic which is transformed into a netlist. In this class we will look at both the net list and the schematics.
